University with a Difference
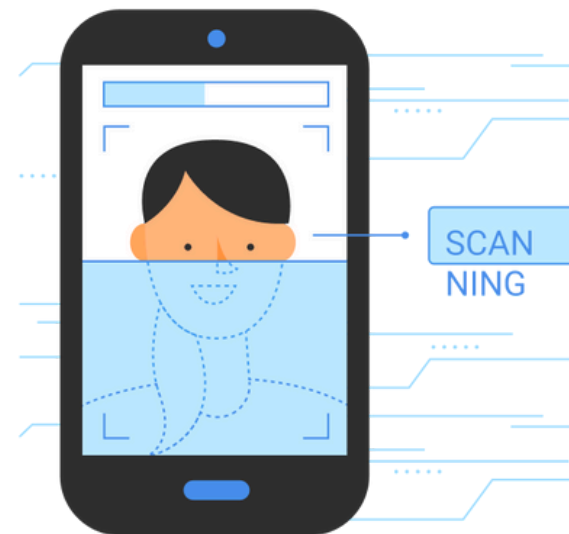

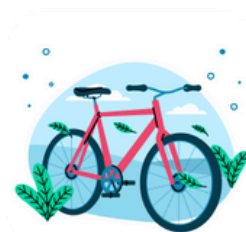

ABOUT

Jarvis is a web app which helps people to get their stuff by scanning the place.

We have used a pre-trained YOLO vII model for better accuracy and faster object detection.

Not a API calling project
We have downloaded the model and then use it, so you don't need internet for local usage.

01 Find Stuff
As of now our model is trained on 80 classes (objects)

02 Bounding box
You will get bounding box on object detected by the model

03 List of Objects
It will show all the objects which has been detected in current session

FLOW

Backend

SNAPSHOTS

FUTURE SCOPE

01 **Add more classes**

02 **Speak to find functionality**

03 **Add LLM with yolo**

THANK
YOU
